

Mycotoxin Risk Management

Mycofix[®] Secure

The risk management solution against aflatoxins and fumonisins in animal feed.

Bentonite with **100% smectite**
(montmorillonite) in 2 μ fraction

Recommended for:

- Feedstuffs and feeds which are contaminated with aflatoxins, fumonisins and ergot alkaloids only
- Reduction of carry-over of aflatoxin B₁ into milk (as AfM₁)
- Growers and finishers where only aflatoxins, fumonisins and ergot alkaloids are present in the feed
- Broilers where only aflatoxins, fumonisins and ergot alkaloids are present in the feed
- Aqua species (fish and shrimp) where only aflatoxins and fumonisins are present in the feed

Benefits:

- High specificity for aflatoxins
- High adsorption of fumonisins and ergot alkaloids
- Low adsorption of vitamins
- Considerable reduction of damages produced by mycotoxins
- Reduced liver damages caused by the presence of mycotoxins in the feed
- Ensure food safety in dairy products (reduced AfM₁ in milk)
- Pellet binding agent
- Anti-caking agent

Administration:

Mycofix® Secure is added directly into the feed during mixing.

Dosage:

- From 1 to 3 kg/mt of finished feed*
- Dairy cattle: 20 - 60 g/cow/day*

* depending on the contamination level and on the co-occurrence of aflatoxins, fumonisins and ergot alkaloids

Packing:

25 kg kraft paper bag

Stability:

24 months from production date

Storage:

Store in a cool and dry place, and avoid direct sunlight
