

Mycotoxin Risk Management

Mycofix® Select 3.0

With 4 active modules Mycofix® Select protects poultry and pigs from mycotoxicoses

Recommended for:

- Rations, when trichothecenes are of main concern
- Poultry layers
- Chicks in the starter phase
- Finishing pigs

Benefits:

- Integral solution to mycotoxin problems through the process of selective adsorption of mycotoxins with polar functional groups and microbial inactivation of trichothecenes.
- Reduced liver and intestinal tract membrane damages caused by the presence of mycotoxins in the feed.
- Reduces lesions and inflammations caused by trichothecenes.
- Stimulates the immune system to compensate the suppression caused by the presence of mycotoxins in the feed.
